

Gallito Limited is a member of the DCS Group of companies

The DCS Group is a leading supplier of high technology products and services for dust and fume control, product finishing, and business software systems and consultancy. Industries served are many and varied and include virtually all types of industrial processes where air quality requires controlling.

DCS Group companies include:

Dust Control Systems Ltd

Dust Control Systems has many years experience in solving dust and fume problems and today is recognised as an industry leader. The company has an established reputation as a solutions and service provider and has exclusive distributor arrangements with a number of major international filter manufacturers.

Spray Booths and Drying Systems

for furniture and joinery production

www.gallito.co.uk

A Solution for all your product finishing needs

At Gallito Ltd, we have been designing, manufacturing and installing product finishing systems for the joinery and furniture industry since 1976.

Today, we offer advanced, cost-effective solutions and our capability extends from standard spray booths and ovens, through to complete finishing systems.

We manufacture an extensive range of standard and bespoke dry-filter and water-wash spray booths, ovens and curing systems, as well as offering complete systems which can include pre-treatment, portable extraction, turntables and component conveyor systems.

Our focus is on high quality design and production, using CNC manufacturing techniques for speed, accuracy and flexibility, with a concentration on customer driven specification. Services embrace system design and manufacture, installation and commissioning, operator training, spares and on-going maintenance programmes.

Dry Filter Spray Booths

With unparalleled build quality, employing only the highest grade materials, Gallito booths feature galvanised panels which are cut to size on a CNC laser cutter, then folded and formed to give a perfect fit. A floor is included in the extraction chamber for improved air flow and to aid cleaning. Available with a full range of compliant exhaust ducting and a choice of filter media, they can be supplied with either axial or centrifugal fans.

Water Wash Spray Booths

Our pump and nozzle type Water Wash Spray Booths are manufactured to exacting standards, and include fully-welded and flanged tanks for extended working life. A 'full booth width' pre-filter prevents contaminants reaching the pump and nozzles, and large bore spray nozzles reduce blockages and improve scrubbing action. Large capacity pumps provide continuous water flow and ABS pipe-work eliminates corrosion.

Box and Tunnel Ovens

All our ovens, whether batch type or conveyerised, have walls constructed from an inner and outer skin of steel with a double layer of insulation, which is interleaved with aluminium foil. Air is circulated by a high temperature centrifugal fan and a forced bleed-off system. Ovens feature a comprehensive control panel with PID temperature control, and tunnel ovens are offered as single, multi-pass or side shuffle.

Pre-Treatment Systems

For effective pre-treatment of components, we offer on-line spray type single-stage or multi-stage systems. Designed and manufactured to suit most requirements, and based around industry standard treatment processes, they feature automated spray on/off linked to either overhead or floor-mounted conveyors.

Infrared Cure Systems

Available as box or tunnel ovens, our infrared cure systems provide wood curing at low temperature. Whether you are involved with large or small items, infrared will dry water-based paints, varnishes and other coatings within minutes. Units can also be supplied for pre-heating of wood-based components prior to spray coating.

Paint Kitchens

At Gallito we design, manufacture and install fully enclosed paint mix rooms, complete with extraction, lighting and bunded floors. Enclosures can be single skin or insulated with access via hinged, sliding or shutter doors, and can be specified with heating and/or cooling systems.
